To whom it may concern,

I am a recent software engineering graduate eager to contribute to public service and enhance both my technical and non-technical skills. With excellent communication abilities and a quick learning aptitude, I thrive on challenges and engaging with projects that push me beyond my comfort zone and help me reach my full potential.

I've taken courses in C/C++, Python, Java, JavaScript, PHP, and Racket. I have also acquired skills in web development and databases such as HTML, CSS, Spring Boot, MySQL, Ruby on Rails by implementing personal projects and taking university courses. Additionally, I completed a 4-month web developer internship where I worked on designing and programming the company's website on Wix.com using JavaScript and HTML.

Throughout my experience in the government sector, I have acquired skills that encompass both technical expertise and administrative proficiency. I have consistently demonstrated my ability to design and document business processes for various projects. Utilizing ArchiMate and BPMN (Business Process Modeling Notation), I have created efficient and scalable software solutions that align technology with organizational objectives. Additionally, I have developed and worked on creating apps in Power Apps, as well as designing flows in Power Automate, integrating these solutions into new and existing systems to enhance their performance and efficiency.

I have used my non-technical skills to contribute to technical research and documentation of software solutions. I have also conducted technical reports for my university classes. I welcome the opportunity to discuss how my skills and qualifications align with the needs of your company.

Please see attached resume for more information.

Sincerely,
Zinah Al-Najjar
